

## TO BE ENVIRONMENTALLY GREEN IS SMART...

Throughout its 10-year history as the key provider of network test access equipment for enterprise-scale organizations and business, Network Critical has supported those environmental programs which are designed to protect our children's future.

We develop and supply solutions-oriented products that improve network security within enterprise organizations and, by doing so, improve the lives of those network professionals who serve them.

Our commitment to protecting the environment is an extension of our relationship with our customers. By placing a premium on client needs and recognizing their own unique environments, we can optimally respond to the changing requirements of end users, including new compliance issues and emerging trends and technologies.

The safety and integrity of our products is key to our relationship with our customers. Over time, certain chemicals and substances may become labeled as "Hazardous Materials" due to government, industry and consumer concerns. When such issues are raised and materials are identified, Network Critical is the first to acknowledge those regulations or bans and guarantee the safety of our products for the end-user and for our environment.

Network Critical products conform to global programs that help us all save money and protect the environment through energy efficient products and practices.

These include the requirements of the U.S. Environmental Protection Agency, the U.S. Department of Energy, the European RoHS Directive and the Waste Electrical and Electronic Equipment (WEEE) Directive and many other similar programs throughout the world.

Aircraft aluminum technology is incorporated into many of our flagship products, significantly reducing product weight and consequential carbon emissions when shipping throughout the world.

Our designers focus on developing high-density network access in a 1U or 2U chassis design with a single (or dual) power supply, thus maximizing rack space utilization and minimizing power consumption for optimum efficiency and cost-saving.

Network Critical products are highly-flexible, configurable, modular and hot-swappable to minimize production and manufacturing costs through product diversification.

All components used in our Printed Circuit Boards are RoHs and WEEE Directive-compliant, ensuring that end-of-life disposal does not contaminate our environment.

Network Critical is committed to those global goals shared by our clients, our competitors and our peers in order to protect preserve and build our fragile environment for future generations.

SMART = GREEN

Network Critical is committed to supporting those environmental policies that are designed to make the world a better place and to protect our environment for future generations.

As the premier provider of Access Technology Solutions around the world, we work hard to make sure that all of our products meet or exceed global regulations put in place to preserve our environment. We fully comply with all requirements of the US Environmental Protection Agency, the US Department of Energy, the European RoHS Directive and the Waste Electrical and Electronic Equipment (WEEE) Directive as well as many other similar programs throughout the world.
